BEHAbelt Novelties

Transmission and conveyor belts, flat belts and V-guide profiles

Twisted O-Rings with hook (O-Rings) made of PU

Twisted BEHAbelt Round belts with hooks in PU 70 A sky blue and PU 75 A orange PLUS are now available in different lengths as within the standard delivery programme. Twisted Round belts are particularly suitable for fast and easy exchange of upright shafts within conveying machineries.

Food line profiles and flat belts

Hydrolysis resistant Round, V- and flat belts are made of PU and TPE with approval for the food industry (EC + FDA).

The food line has been developed with great weld-ability and a far extended lifetime in wash-down areas. Flat belts for tailoring or top cover use.

Conductive belts made of PU

Emerald green and black belts are made with static dissipative and static conductive Characteristics, along with good weld-ability. The belts without conductive carbon additives are available in different lengths.

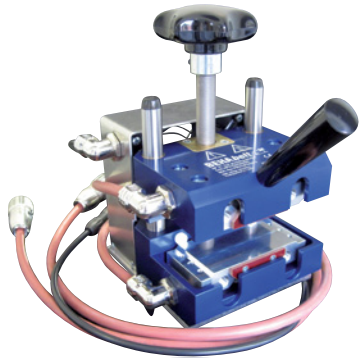

Soft V-guide profiles

The soft BEHAbelt PU V-guide profiles with approval for the food industry (EC + FDA) are very flexible and furthermore excellent to weld on various flat belt qualities.

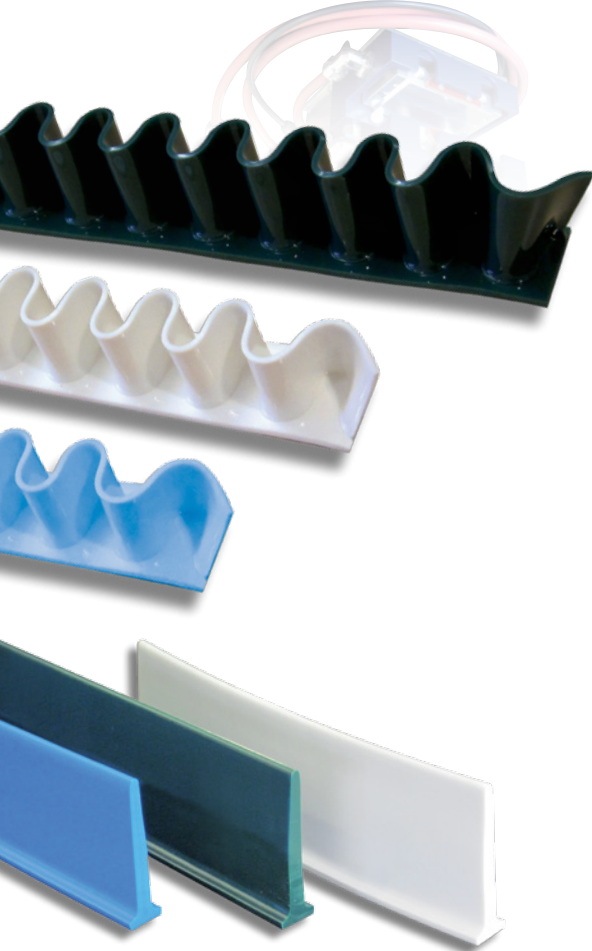

BEHAbelt Novelties

Welding tools, sidewalls and cleats

HP01 Hotpress

Controller guided HP01 Hotpress with air or water cooling for welding of timing belts, flat belts and reinforced belts directly “on-site” within the machinery.

Sidewalls made of PU

BEHAbelt PU Sidewalls with antibacterial surface are especially flexible and therefore cause a considerable reduction of the required minimum drum pulley diameter. For conveying of loosen goods (bulk goods) over pitches and inclines.

Cleats made of PU

True-to-form cleats made of Polyurethane and with an excellent weld-ability on PU flat belts are available in different colours and heights. Welding on flat belts with hot air or high-frequency.
